

FLOW-TRONIC SA NV

**NEWS N°3
November 2006**

Dear All,

Just a few things to follow:

Sewer-mag application in Belgium

The customer presented four similar sites where flow should be measured. Water flows from a ship canal located at about 10 meters from the visible water outlet.

A concrete tank has been built by a contractor. A gate installed on the inlet allows water to enter and rise into the tank. The only possible outlet is the Sewer-mag with its IDM. A converter powered by batteries adds up flows (requested by the Canal Company to bill water consumption).

Water splashing depends from gate opening at the inlet pipe. Measuring range is 0 to 280 m³/h; battery life is 3-5 years.

Exhibition WWEM in Telford – United Kingdom

Flowline Manufacturing, our British representative participated to this exhibition with our support. After Germany, we also introduced our new Atex GPRS data logger.

About this, did you already have the opportunity to surf on www.123flow.com? Do you have questions? Do not hesitate to contact us, Mr Sévar will give you more information about this new revolutionary product!

Flo-Mate SPECIAL ACTION

Do you have any news about your customers or leads? Shall we have some orders before the end of this year?
